

Software and databases

Research in economics is often based on creating, populating and managing databases, mathematical modeling, statistical analysis and econometrics. To do so, the CATT has acquired specific IT resources in particular, statistical and mathematical databases and software.

- * **CHELEM** a database on the GDP throughout the world and on international trade.
- * **COMTRADE** a database on international trade.
- * **MAcMAP** is a database on access to markets, customs protection and regional and preferential agreements.
- * **Word Development Indicators** database.
- * **GAMS**, mathematical solving software
- * **MATHEMATICA**, mathematical solving software
- * **RATS** econometrics software
- * **SAS** econometrics software
- * **SPSS** econometrics and statistical analysis software.
